321-759-5293

Overview

With over 12 years of experience creating websites, pleasing aesthetics and effective user experiences come natural. As an engineer, I exhibit great strength in discovering technical problems, then quickly and accurately delivering logical solutions. My experience in every facet of the application lifecycle has diversified my skillset, making me a viable asset to every area of technical projects.

Technical Summary

Web sites, desktop and mobile applications
Agile methodologies and project management
Version control, hosting, deployment and operations
SEO, analytics, and security implementation
Comfortable in Java, .NET, PHP, Python and Ruby
See http://alexcrawford.me/ for more experience and code samples

Work History

Creative Media Development   *2013 - Currently employed*
Web Developer

Working in a fast-paced, client-oriented agency to deliver new projects while maintaining existing projects, and operations for many clients including JELD-WEN, Intel, HP, and Western Star.

JELD-WEN   *2012 - Currently employed*
Lead Web Developer

Developed numerous web components, IT integrations and reviewed external contributions, saving substantial time and money while gaining insight to the corporate world, business aspects and project management. Acted as an integral member of our agency in San Francisco, Fluid Inc, obtaining crucial knowledge of remote management and collaboration.

Eternaware / CageHost   *2011 - 2012*
Sole Proprietor, Freelance Developer

Operated my own business, successfully finding numerous clients for whom I could provide complete, custom solutions including design, development and automated hosting and billing.

Recent Projects

JELD-WEN - Components and maintenance - http://jeld-wen.com
Over 100,000 lines of code, and 50,000 removed. Developed the Egress Calculator, Find a Store, and Order Status locator components, as well as numerous HTML emails and articles. Integrated numerous analytics hooks to Adobe SiteCatalyst.

CageHost - http://cagehost.com (out of commission)
As a developer with a passion for Linux and server management, I created an all-in-one solution for clients needing websites, which included domain registration, managed hosting, support and automated billing using cPanel, WHM, WHMCS, and SolusVM.

JustMakeGames - http://alexcrawford.me/articles/justmakegames
What began as a school club quickly became a game developer's social network with over 2,000 members and 400,000 YouTube views, tutorials, reviews, points and prizes.

Ace Login Register - http://codecanyon.net/item/joomla-login-register-slider-module/1645693
Developed a component to improve Joomla authentication by combining the native multi-page login and registration into one slick, themeable AJAX module.
